Why?

Reading docs is a full-time job.

Because the API **changes often**, new endpoints, new parameters, **new surprises**.

Add a Claude Skill for API calls

`~/.claude/skills/search-claude-api-docs/SKILL.md`

- Skills are defined in the `~/.claude/skills/` directory (which is `/Users/janheimes/.claude/skills/` on your system).

Each skill is a subdirectory containing a `SKILL.md` file. For example:

– **Path:** `~/.claude/skills/search-claude-api-docs/SKILL.md`

The `SKILL.md` file has frontmatter that defines:

- **name:** The skill name
- **description:** When the skill should be used

The file content provides the instructions that get loaded when the skill is invoked.

Add Needle Remote MCP

To Claude Code

```
○ janheimes@MacBook-Pro-8 needle %  
  claude mcp add  
  --transport http needle https://mcp.needle.app/mcp  
  --header "Authorization:Bearer YOUR NEEDLE API TOKEN"
```

```
● janheimes@MacBook-Pro-8 needle % claude mcp list  
  Checking MCP server health...  
  
  needle: https://mcp.needle.app/mcp (HTTP) – ✓ Connected
```

Claude Code Will Call Skill

Dynamic Prompt Execution

- Based on the Claude Docs collection, here's a quick overview of the **Claude API**:

What is Claude?

Claude is Anthropic's family of AI models that can handle text and vision tasks. The API provides these models for building AI applications.

Key Features

- **Multiple Models:** Choose from Opus (most capable), Sonnet (balanced), and Haiku (fastest/cheapest)
- **Vision Capabilities:** Upload and analyze images alongside text
- **Long Context Windows:** Process large documents reliably with low hallucination rates
- **Multilingual:** Strong performance in English, Spanish, Japanese, and 200+ languages
- **Tool Use:** Claude can use external tools and APIs to take actions
- **Cost-Conscious:** Family of models balances performance and cost
